37     <p>Master data analysis and visualization using Python.</p>
```

Specifies the height of the content area, padding area or border area (depending on 'box-sizing') of certain boxes.

Widely available across major browsers (Baseline since 2015)

Syntax: auto | <length-percentage [0,∞]> | min-content | max-content | fit-content | fit-content(<length-percentage [0,∞]>) | <calc-size()> | <anchor-size()>

[MDN Reference](#)

Next recommendation

- If this repeats
  - Move your file to OneDrive
  - or
  - Compile (e.g., -t timestamp) collision
  - Pause development
- I can add a timestamp that auto-named (timestamp)

Anything else you need now? (e.g., add [code.c](#), create script, or move file to OneDrive)

prevents writing to while it's running (another process like OneDrive/antivirus) • Killing the running releases the handle can overwrite the fi

Next recommended act

- If this repeats often
  - Move your project to OneDrive while you're working.
  - Compile to named temporary files (e.g., -o code.c) to avoid timestamped name collisions, or
  - Pause OneDrive during development.
- I can add a tiny configuration that auto-names output files (timestamped) if you want.

Anything else you'd like to add now? (e.g., add input variables, add code.c, create a small script, or move the project to OneDrive)
